

Ing. Arch.
**MICHAELA
RUDOLFOVA**

PROFILE

<https://michaelarudolfova.vercel.app>

I graduated as an architect from CTU Prague, but a few years later I found my way to Frontend Development. I take great pleasure in creating, learning and being part of an IT community.

Since the beginning of my career change, I've been an active participant in the ReactGirls community. Currently, I am interested in exploring React, Typescript, Tailwind and GraphQL technologies, but I am open to learning new technologies. In the future I am not afraid of more full-stack and backend technologies.

WORK EXPERIENCE

VS POINT - FRONTEND DEVELOPER

01/2021 – now, Sámova 220, Prague

I have collaborated with the company VS Point on several projects. I have deepened my knowledge of Next, React, Typescript, Tailwind or GraphQL and Relay technologies. We work on projects as a team, where targeted communication with other frontend developers, designers and backend developers is an essential part.

FREELANCER - FRONTEND DEVELOPER

11/2020 – now

My first project created in React was the official website for ReactGirls, developed as a part of the ReactGirls mentoring program, including UX/UI design created in Figma.

Following this, I had the opportunity to collaborate on various Frontend projects such as Fitnut, Braineer Academy and the Oenergetice.cz platform. On these projects, I worked under the guidance of an experienced colleague using Next, React, Typescript, and Styled Components technologies.

At the same time, I independently created some presentation websites using Webflow. My favourites are zixkomix.com, a disc golf instructional guide website and vitrdoplachetproeleonorku.cz, a volunteer project intended to help a little girl named Eleonorka, diagnosed with Spinal Muscular Atrophy (SMA) disease.

STUDIO QARTA - ARCHITECT

06/2019 – 11/2020, Pernerova 635, Prague

I gained experience in a larger office setting while working on a major development project near Liberec. My favourite project I worked on in the office is the reconstruction of the Winter Stadium in Opava.

STUDIO HOFFMAN - ARCHITECT

11/2017 – 03/2019, Mickiewiczova 235/5, Prague

I independently led a project for the reconstruction of Ořechovka villa into a dental surgery office. My job was to make an architectural study with dozens of variants, to develop a project for a building permit, coordinate other professions and negotiate with the proper authorities. I also provided supervision during the construction.

WORKSHOPS

REACTGIRLS / 2020 - now

I have been actively involved in the ReactGirls community since I began my new career path. I started by participating in a mentoring program, resulting in the new ReactGirls website, written in React and designed in Figma. In addition to regularly participating in meetups, this year I helped with the Javascript and React coaching for the Autumn Academy. I gave a lecture on the topic of „Work on Travels“ at one of the meetups too.
